🪪 Profile

As an experienced **DevOps Engineer**, I have implemented various modern technologies to enhance the quality of service infrastructure, focusing on security, scalability, availability, and observability. I have extensive experience building and managing CI/CD pipelines with Jenkins, containerization using Docker and Kubernetes, and monitoring with Grafana and Prometheus. I am also skilled in logging systems using Loki and Promtail, and infrastructure automation using Ansible (Infrastructure as Code).I am proficient in using various cloud providers, especially **AWS**. On the programming side, I am advanced in PHP with the Laravel framework, and have basic knowledge of Golang and Node.js.

💼 Professional Experience

Global Investa Capital (GIC)   10/2023 - present
DevOps Engineer   Medan, Indonesia
- Containerization all service with docker
- Create CI/CD Pipeline and automation with Jenkins
- Implementation kubernetes cluster with AWS EKS and migration all
  service into the cluster
